

Scan Report

July 1, 2022

Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone “Coordinated Universal Time”, which is abbreviated “UTC”. The task was “Scan ADM01”. The scan started at Fri Jul 1 16:05:46 2022 UTC and ended at Fri Jul 1 16:08:46 2022 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

Contents

1	Result Overview	2
2	Results per Host	2
2.1	192.168.2.10	2
2.1.1	Log general/CPE-T	2
2.1.2	Log general/icmp	3
2.1.3	Log general/tcp	4

1 Result Overview

Host	High	Medium	Low	Log	False Positive
192.168.2.10	0	0	0	5	0
Total: 1	0	0	0	5	0

Vendor security updates are not trusted.

Overrides are off. Even when a result has an override, this report uses the actual threat of the result.

Information on overrides is included in the report.

Notes are included in the report.

This report might not show details of all issues that were found.

Issues with the threat level “High” are not shown.

Issues with the threat level “Medium” are not shown.

Issues with the threat level “Low” are not shown.

Issues with the threat level “Log” are not shown.

Issues with the threat level “Debug” are not shown.

Issues with the threat level “False Positive” are not shown.

Only results with a minimum QoD of 70 are shown.

This report contains all 5 results selected by the filtering described above. Before filtering there were 5 results.

2 Results per Host

2.1 192.168.2.10

Host scan start Fri Jul 1 16:06:35 2022 UTC

Host scan end Fri Jul 1 16:08:44 2022 UTC

Service (Port)	Threat Level
general/CPE-T	Log
general/icmp	Log
general/tcp	Log

2.1.1 Log [general/CPE-T](#)

Log (CVSS: 0.0)

NVT: CPE Inventory

Summary

This routine uses information collected by other routines about CPE identities of operating systems, services and applications detected during the scan.

... continues on next page ...

...continued from previous page ...
Note: Some CPEs for specific products might show up twice or more in the output. Background: After a product got renamed or a specific vendor was acquired by another one it might happen that a product gets a new CPE within the NVD CPE Dictionary but older entries are kept with the older CPE.
Vulnerability Detection Result 192.168.2.10 cpe:/o:microsoft:windows
Solution:
Log Method Details: CPE Inventory OID:1.3.6.1.4.1.25623.1.0.810002 Version used: 2021-04-16T10:39:13Z

2.1.2 Log general/icmp

Log (CVSS: 0.0) NVT: ICMP Timestamp Detection
Summary The remote host responded to an ICMP timestamp request. The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp. This information could theoretically be used to exploit weak time-based random number generators in other services.
Vulnerability Detection Result Vulnerability was detected according to the Vulnerability Detection Method.
Solution:
Log Method Details: ICMP Timestamp Detection OID:1.3.6.1.4.1.25623.1.0.103190 Version used: 2021-03-23T06:51:29Z

2.1.3 Log general/tcp

Log (CVSS: 0.0)

NVT: OS Detection Consolidation and Reporting

Summary

This script consolidates the OS information detected by several VTs and tries to find the best matching OS.

Furthermore it reports all previously collected information leading to this best matching OS. It also reports possible additional information which might help to improve the OS detection.

If any of this information is wrong or could be improved please consider to report these to the referenced community portal.

Vulnerability Detection Result

Best matching OS:

OS: Microsoft Windows

CPE: cpe:/o:microsoft:windows

Found by NVT: 1.3.6.1.4.1.25623.1.0.102002 (Operating System (OS) Detection (ICM $\leftrightarrow$ P))

Concluded from ICMP based OS fingerprint

Setting key "Host/runs_windows" based on this information

Log (CVSS: 0.0)

NVT: Traceroute

... continues on next page ...

...continued from previous page ...
Summary Collect information about the network route and network distance between the scanner host and the target host.
Vulnerability Detection Result Network route from scanner (192.168.2.21) to target (192.168.2.10): 192.168.2.21 192.168.2.10 Network distance between scanner and target: 2
Solution:
Vulnerability Insight For internal networks, the distances are usually small, often less than 4 hosts between scanner and target. For public targets the distance is greater and might be 10 hosts or more.
Log Method A combination of the protocols ICMP and TCP is used to determine the route. This method is applicable for IPv4 only and it is also known as 'traceroute'. Details: Traceroute OID:1.3.6.1.4.1.25623.1.0.51662 Version used: 2021-03-12T14:25:59Z

Log (CVSS: 0.0) NVT: Hostname Determination Reporting
Summary The script reports information on how the hostname of the target was determined.
Vulnerability Detection Result Hostname determination for IP 192.168.2.10: Hostname Source 192.168.2.10 IP-address
Solution:
Log Method Details: Hostname Determination Reporting OID:1.3.6.1.4.1.25623.1.0.108449 Version used: 2018-11-19T11:11:31Z
